Print Your Own Full-Color Labels At Your Office, Warehouse, Factory or Store!

Now you can print brilliant, high-resolution color labels and tags when and where you need them. It's fast and easy with Primera's® new LX800 Color Label Printer. With spectacular 4800 dpi print resolution and high throughput speeds, LX800 is simply the best industrial-grade color inkjet label printer ever made!

Your labels can include full-color photos, illustrations, graphics and text along with bar codes on pressure sensitive labels and tags. You can print just one label at a time or thousands per day.

Professional-Quality Results

There's no need to settle for low-resolution color labels on your products. LX800's incredible 4800 dpi printing delivers results that far exceed virtually any other on-demand print method available today.

Five built-in print resolutions let you select the combination of print quality and speed that fits your application best. No matter which you choose, your labels are bright, colorful and professional. You can mix any combination of text, graphics, photos and illustrations. Any font already installed on your PC can be printed, giving you maximum flexibility and creativity in your designs.

Primera's exclusive PrimaColor™ Color Matching Software is included. It meets stringent International Color Consortium (ICC) standards to give you accurate and professional color on every label you print.

Heavy-Duty Design

With its durable metal frame and tough sheet metal case, LX800 is designed for use in environments ranging from the office desktop to a busy warehouse or factory floor. Label materials are stored inside the printer cabinet to protect them from dust and dirt. Replacing ink cartridges and labels takes just seconds each.

A Wide Variety of Materials – Including Labels That Are Highly Water-Resistant!

LX800 prints onto many different materials, including high-gloss, matte and semi-gloss labels. You can also print onto tags, synthetics, continuous forms, transparent polyesters and low-tack ad-hesive materials. There's even a high-gloss label stock that's highly water-resistant. It's perfect for primary or box labels that can be exposed to water, rain and snow.

You can print labels as narrow as 1.5" wide up to a full 8" wide and up to 24" long.

Two different types of ink – dye and pigment – are available. This ensures that your combination of ink and substrates are the perfect match for your application.

Get Up and Running Quickly

From initial set-up to full operation, the LX800 is easy to use. The Windows XP/2000 drivers control all printer functions. Label design software from NiceWare™ and a sample roll of high-gloss, water-resistant labels are also included. You'll be printing full-color labels within minutes of taking the printer out of its shipping box!

Uncompromised Value

Until now, in-house color label printers were prohibitively expensive. But now, you can produce stunning, full-color labels for a fraction of the cost of other color label printers. Better yet, the LX800's print resolution is far higher than thermal transfer or other inkjet color printers. With the LX800, you're getting the best value and the best output quality!
