

How do I install the driver for the first time after downloading it from the website? (Windows 7 Only)

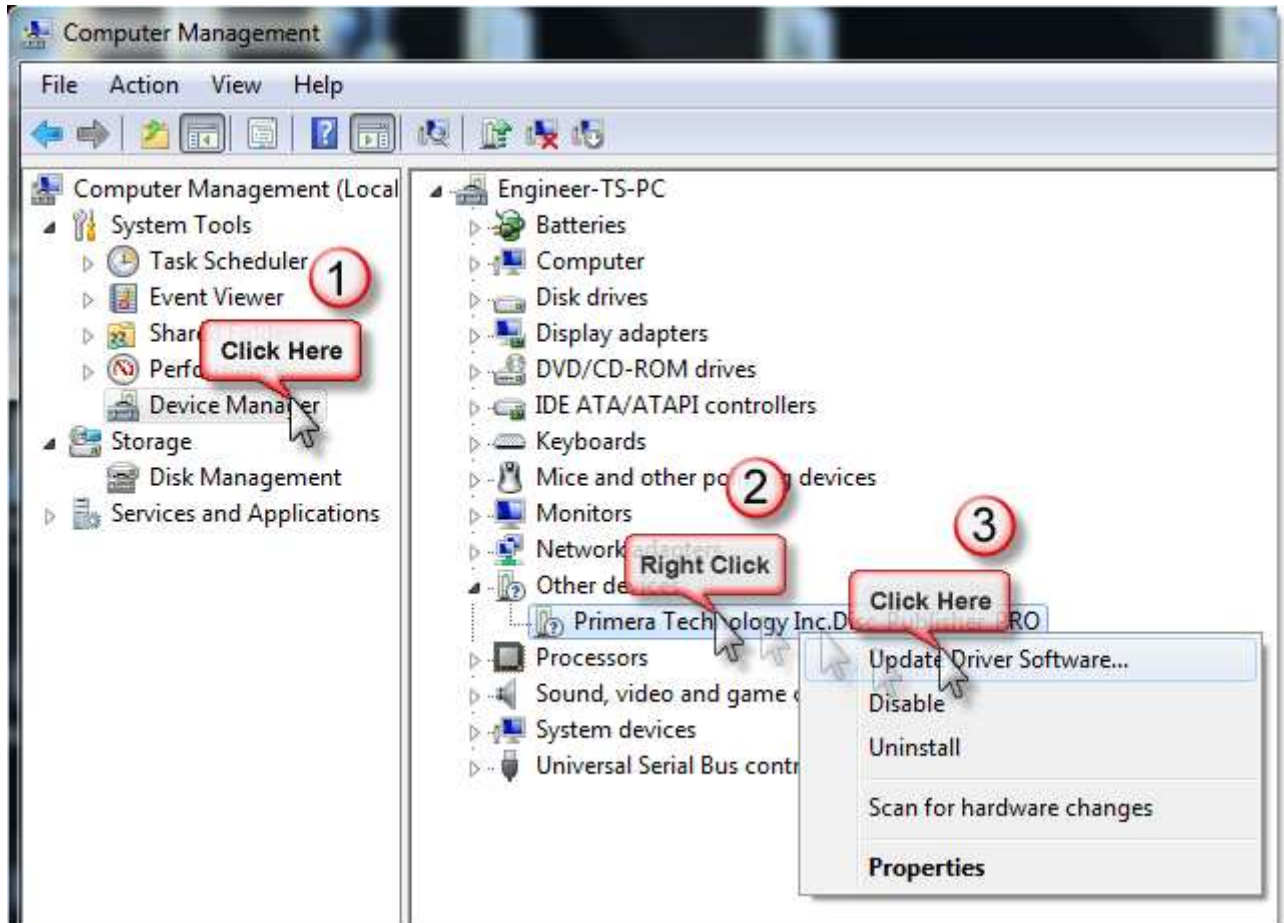

1. Download the driver from the website.
2. Double click the downloaded driver to extract the driver contents to a folder at the root of your C-Drive (Example: C:\DPProDriver\)
3. Connect the usb cable and power cable to the unit.
4. After a short time the following message will appear.

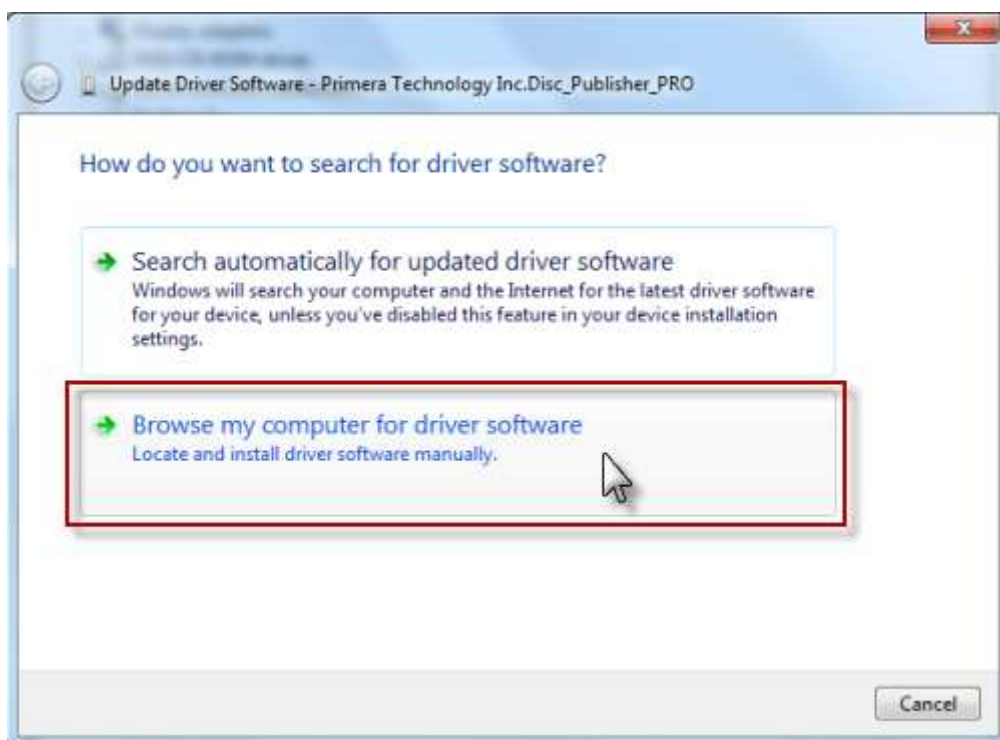

5. To install the driver Click the Windows button - Right Click on Computer - Click on Manage.

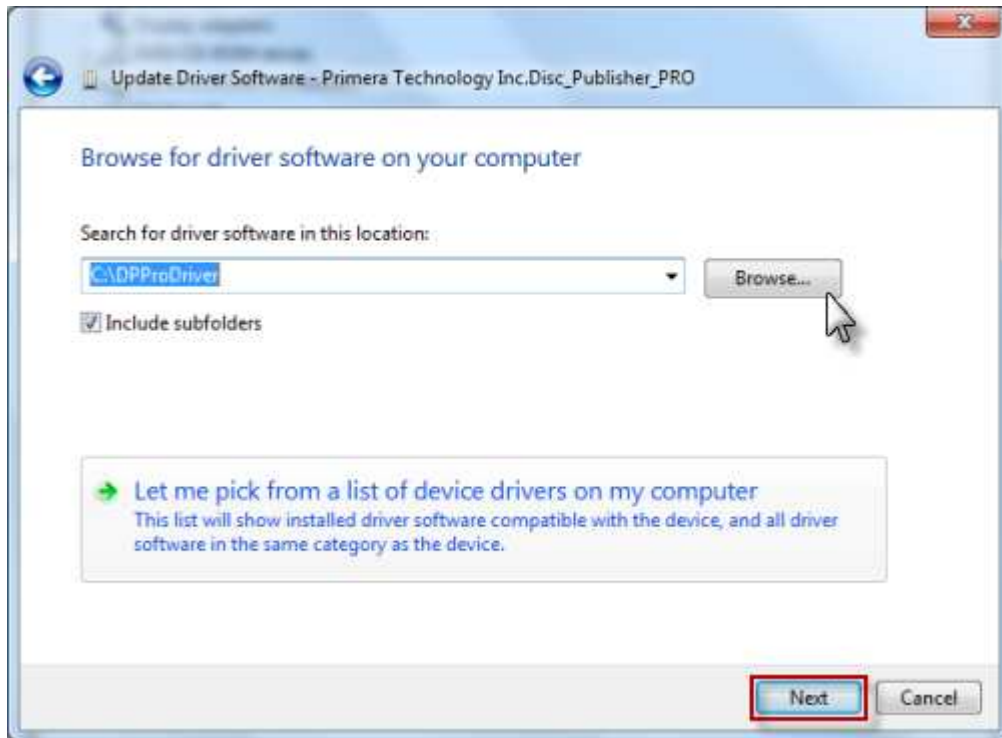

6. Click on Device Manager - Find the Primera product name under Other Devices - Right Click on it - Choose Update Driver

7. Click Browse my computer...

8. Browse to the location of the driver displayed in Step 2. The driver automatically extracts to the root of your C drive in a folder named for the product (Example: C:\DPPProDriver\). Click Next.

9. Click "Install this driver software anyway."

10. You will receive a "Windows has successfully updated..." message when complete.
